

# NEXT-GEN PROTECTION FROM WEAPONIZED FILES FOR BANKING AND FINANCE

A prime prey for cybercriminals, the financial institutes' transition to digital services is paved with ransomware attacks and fraud incidents. From KYC (Know Your Customer) processes, through check clearings, to downloaded documents – banks and financial services depend on online transactions and constant online communication with their customers on a daily basis. This handling of immense amounts of incoming documents [such as check scans and uploads via portals, ID copies, or image files] constantly exposes financial institutes to malicious file-borne attacks, all easily evade standard security systems, such as sandbox solutions.

## ENDING RANSOMWARE AND CYBER ATTACKS BY SECURING DIGITAL TRANSACTIONS

Whether a scanned PDF, or an uploaded check image or document sent from the customer's personal mobile device, once Votiro Disarmer is deployed, every single file coming in via any digital transaction is automatically routed to Votiro's File Disarmer. There, every document is dissected and recursively cleansed of any known or unknown potential exploit, and then sent back to the local server, completely safe to open, save, and edit. With every file entering the organization neutralized from potential exploits, banks and other financial services can put file-borne ransomware behind them.

### Typical Bank and Financial Industry Use Cases for the Votiro Disarmer:

1. Hackers now embed malicious code hidden in images of checks being uploaded to bank portals. Votiro Disarmer scans and sanitizes millions of checks a month ensuring all malicious material is cleansed before checks enter the network.
2. Financial files and documents are shared via FTP, SFTP, FTPS, etc, without precautions in place to ensure the documents shared are not weaponized. Votiro Disarmer scans and sanitizes millions of documents a month shared via these channels, ensuring they are cleansed before opening.
3. Votiro Disarmer sanitizes all files uploaded via banks' chat applications used by customers to send the bank documents, application forms, et cetera.
4. Votiro Disarmer scans and sanitizes millions of financial forms and applications sent to banks via email, and integrates seamlessly with existing email providers and email security solutions.

**Once Votiro Disarmer is integrated, your employees can open any files sent or shared without having to give it a second thought. Peace of mind and business continuity-delivered.**
