API Penetration Testing

ImmuniWeb® On-Demand

Test your microservices and APIs for OWASP Top 10 and SANS Top 25 vulnerabilities with ImmuniWeb® On-Demand penetration testing. Every penetration test is provided with a contractual zero false positives SLA and moneyback guarantee if there is even a single false positive in your report. Customize testing in authenticated mode using MFA, OTP or SSO. Detect privilege escalation, authentication bypass and API business logic vulnerabilities.

Every penetration test is provided with unlimited patch verification assessments so your developers can fix the problems and then re-run the test at no additional cost. Download your report in PDF format or export the vulnerability data into your SIEM or WAF via our DevSecOps integrations. Enjoy a 24/7 access to our security analysts should you have any questions about the report.

API Security Scanning

Run unlimited scans of your APIs and microservices for OWASP API Top 10 vulnerabilities with ImmuniWeb
Neuron. Schedule recurrent API scans in a few clicks. Customize scan configuration and authentication. All scans are provided with a contractual zero false positives SLA and money-back guarantee for a single false positive in your scan report. Our Machine Learning technology provides better vulnerability coverage compared to traditional scanners.

Scan reports are available via a multiuser dashboard with RBAC access permissions. Our turnkey CI/CD integrations enable 100% automation of web application security, privacy and compliance testing within your CI/CD pipeline on premise or in a cloud environment. Our 24/7 technical support is at your service may your software developers have questions or need assistance.

ImmuniWeb® Neuron

Attack Surface Management

ImmuniWeb[®] Discovery

Illuminate your external attack surface with ImmuniWeb
Discovery just by entering your company name. The non-intrusive discovery process will rapidly detect, classify and risk-score your IT assets located on premises or in a cloud environment. Find vulnerable software, expiring domains and SSL certificates, outdated or misconfigured systems, and shadow IT infrastructure. Detect unprotected code, container images or system snapshots available in third-party repositories. Visualize geographical areas and countries where your data is stored for compliance purposes.

Setup granular email alerts to your team for any newly discovered assets, misconfigurations, vulnerabilities and security incidents. Use groups and tags for fine-grained asset monitoring and management. Enjoy a fixed monthly price per company regardless of the number of IT assets or events you have. Leverage the API to synchronize data flow directly with your internal security systems or export selected findings into PDF or XLS.

Coud Penetration Testing

Test your web applications, cloud-native apps, microservices or APIs hosted in AWS, Azure, GCP or other cloud service providers with lmmuniWeb® On-Demand penetration testing. Detect OWASP Top 10 and SANS Top 25 vulnerabilities, as well as OWASP API Top 10 weaknesses and cloud-specific misconfigurations. Uncover what can be done with cloud IMDS pivoting and privilege escalation attacks by exploiting excessive access permissions or default IAM policies in your cloud environment.

Every cloud penetration test is provided with unlimited patch verification assessments so your cloud engineers can fix the security flaws and then validate, at no additional cost, that everything has been properly remediated. Download your cloud pentest report from the interactive dashboard into PDF or export data directly to your SIEM or WAF via our DevSecOps integrations. Enjoy a 24/7 access to our security analysts should you have any questions about the report or findings.

ImmuniWeb® On-Demand

Cloud Security Posture Management

ImmuniWeb[®] Discovery

Get a helicopter view on your multi-cloud attack surface with ImmuniWeb® Discovery. The cloud security posture management rapidly detects your externally visible cloud assets, including computing instances, data storage, gateways, load balancers, databases and other managed services in AWS, Azure, GCP and over 50 other public cloud service providers. In addition to assessing your cloud attack surface for various misconfigurations, excessive access permissions or default IAM policies, we also map your geographical data storage for compliance and regulatory purposes.

Unlike other vendors, you don't need to provide us with a cloud IAM account, simply enter your company name to run the discovery process and continuous security monitoring. Detect shadow cloud storage and unwarranted cloud usage. Customize alerts to relevant people in your DevOps team. Leverage our API to synchronize the data flow with your existing SIEM systems or export the findings into PDF or XLS. Enjoy a fixed monthly price per company regardless of the number of cloud assets, tests or events.

Outperform traditional penetration testing with on-going 24/7 penetration testing by ImmuniWeb® Continuous. We rapidly detect new code or features in your web applications and APIs and then test the changes for security vulnerabilities, compliance or privacy issues. Once an issue is identified, you will be immediately alerted by email, SMS or phone call. For all customers, we offer a contractual zero false positives SLA and moneyback guarantee for a single false positive.

Leverage our integrations with the leading WAF providers for instant virtual patching of discovered vulnerabilities. Request a re-test for any finding with one click. Ask our security analysts your questions about exploitation or remediation of the findings at no additional cost. Get a live dashboard with the findings, download vulnerabilities in PDF or take advantage of our DevSecOps integrations to export the data into your bug trackers or SIEM systems.

ImmuniWeb® Continuous

ം Cyber Threat Intelligence

ImmuniWeb® Discovery

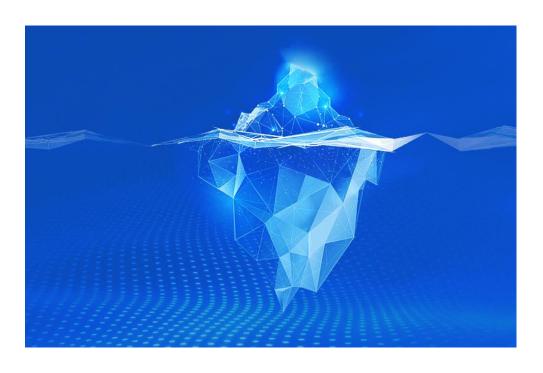

Monitor the cyber threat landscape and security incidents with ImmuniWeb® Discovery. Just enter your company name to detect ongoing phishing campaigns, squatted domain names, fake accounts in social networks or malicious mobile apps imitating your identity. Get instant alerts about mentions of your company or its IT assets on the Dark Web, hacking forums or underground marketplaces. Detect Indicator of Compromise (IoC) on your on-premises or cloud systems. Spot and investigate your systems being added to various blacklists for suspicious or hacking activities.

Bundled with attack surface management, the cyber threat intelligence will automatically search for any incidents implicating any of your systems, domain names, applications and users. Dispatch instant alerts about new findings to relevant people in your team by using groups and tags on the interactive dashboard. Export the findings into PDF or XLS, or dispatch them directly to your SIEM by using the API. Enjoy a fixed price per company regardless of the number of assets, findings or events.

Dark Web Monitoring

Discover data leaks, stolen credentials and confidential documents on the Dark Web with ImmuniWeb® Discovery. Monitoring of underground marketplaces and hacking forums is complemented with 24/7 surveillance of paste websites, social networks, IRC and telegram channels. Unlike other vendors' services, our Dark Web monitoring is bundled with attack surface management to automatically detect all mentions of any of your systems, domain names, applications or users without the need to enter all of them manually.

Just enter your company name to launch the discovery and continuous monitoring that will also bring to your attention ongoing phishing and domain squatting campaigns, fake social network accounts, malicious mobile apps usurping your brand, and indicators of compromise (IoC) on your onpremises or cloud-based IT assets. Browse classified findings on the interactive dashboard, export the findings to PDF or XLS, or use the API to automatically synchronize the data with your SIEM or DFIR systems. Enjoy a fixed monthly price per company regardless the number of security incidents, mentions or leaks in the Dark Web.

ImmuniWeb® Discovery

Digital Brand Protection

ImmuniWeb[®] Discovery

Detect trademark infringements and brand misuse cases on the Internet with ImmuniWeb® Discovery. Combined with attack surface management, brand protection rapidly brings to your attention cyber and typo squatting of all national or global domain names, phishing campaigns, fake accounts in social networks, and malicious mobile applications imitating your brand or company. Detect fraudulent websites that imitate your design for unlawful purposes.

Just enter your company name to launch the continuous monitoring. Enjoy a fixed monthly price per company regardless the number of your domains, incidents or phishing campaigns. Customize alerts to relevant people in your team or send notifications to your lawyers directly. Leverage our API to synchronize the data flow with your internal systems or export the findings into PDF or XLS.

GDPR Penetration Testing

Use ImmuniWeb® On-Demand for regular penetration testing of your systems that store or process personal data as required by GDPR and EDBP guidelines. Every penetration test is provided with a contractual zero false positives SLA and money-back guarantee if there is even a single false positive in your report. Detect OWASP Top 10 and SANS Top 25 security vulnerabilities and misconfigurations in your web applications and APIs. Get valuable hints about privacy misconfigurations that may violate compliance or regulatory requirements.

Run unlimited vulnerability verification assessments at no cost after the pentest, so your developers can easily validate whether the findings are properly fixed. Explore a multirole dashboard with the findings, download vulnerabilities in PDF or take advantage of our DevSecOps integrations to export the data into your bug tracking or SIEM systems. Leverage our integrations with the leading WAF providers for one-click virtual patching of the security flaws.

ImmuniWeb® On-Demand

Mobile Penetration Testing

ImmuniWeb® MobileSuite

Detect OWASP Mobile Top 10 weaknesses in your iOS or Android mobile app and discover SANS Top 25 vulnerabilities in the mobile app's endpoints with ImmuniWeb® MobileSuite. Review whether your mobile app privacy, compliance and encryption mechanisms conform to industry best practices. Every mobile penetration test is equipped with a contractual zero false positives SLA and a money-back guarantee if there is even a single false positive in your report.

Run a Black Box or authenticated testing using SSO, MFA or OTP. Detect business logic and authentication bypass vulnerabilities. Leverage unlimited patch verification assessments after the penetration test, so your software developers can easily validate whether all the findings have been properly patched. Export vulnerability data from your interactive dashboard to PDF or directly into your SIEM or bug tracking system for faster remediation.

Mobile Security Scanning

Detect OWASP Mobile Top 10 weaknesses with ImmuniWeb® Discovery. Just enter your company name to start a non-intrusive discovery process and get a comprehensive list of your iOS and Android mobile apps available in over 30 public stores, such as Google Play or Apple Store. Automated SAST, DAST and SCA testing will be automatically launched on the discovered mobile apps to detect OWASP Mobile Top 10 vulnerabilities and weaknesses.

Later you may upload any mobile apps that belong to your company at no additional cost in case they are not automatically discovered or are unavailable in public app stores. On top of the mobile vulnerability scanning, you will also see various privacy issues, such as excessive or dangerous mobile app permissions, missing or weak encryption, and external communications of the mobile app. Our security analysts are available 24/7 to answer your questions about the findings. All features, including the unlimited security scanning, are available at a fixed monthly price.

ImmuniWeb® Discovery

品 Network Security Assessment

ImmuniWeb® Discovery

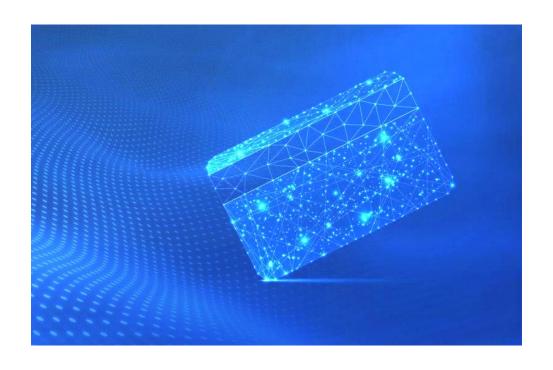

Discover your externally accessible network services with ImmuniWeb Discovery that bundles attack surface management with network security assessment. Just enter your company name to get a comprehensive snapshot of your servers, network devices and other IT assets hosted on premises or in a cloud. Every open port is carefully analyzed to fingerprint the running service and its version to provide you with a risk-based scoring. Unlike traditional vulnerability scanning solutions, our production-safe scanning technology will not disrupt or slow down your network services.

Detect shadow, abandoned or forgotten servers and network equipment with critical vulnerabilities. Reduce your network attack surface to accelerate and cut costs of network penetration testing. Dispatch instant alerts to the relevant people in your team by using groups, tags and alerts on the interactive dashboard. Export vulnerability data via the API or get the selected findings in PDF or XLS. Enjoy a fixed monthly price per company regardless the number of network assets and services.

PCI DSS Penetration Testing

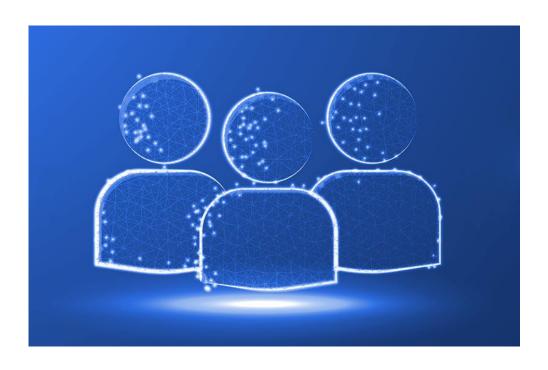

Use ImmuniWeb® On-Demand for regular penetration testing of your systems that store or process payment cards data as mandated by PCI DSS. Detect OWASP Top 10, PCI DSS 6.5 List and SANS Top 25 security vulnerabilities and misconfigurations in your web applications, microservice and APIs. Every penetration test is provided with a contractual zero false positives SLA and a money-back guarantee if there is even a single false positive in the report.

After the pentest, run unlimited vulnerability verification assessments at no cost, so your software engineers can easily check whether the pentest findings have been fixed promptly, as required by PCI DSS. Get a multirole dashboard with the findings, download vulnerabilities in PDF or take advantage of our DevSecOps integrations to export the data directly into your bug tracking or SIEM systems. Leverage our partnerships with the leading WAF providers for one-click virtual patching of the detected security vulnerabilities.

ImmuniWeb® On-Demand

Red Teaming Exercise

ImmuniWeb® On-Demand

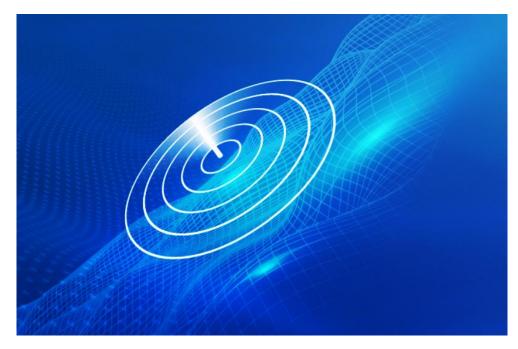

Leverage ImmuniWeb® On-Demand for Red Teaming exercises tailored to your cybersecurity strategy and business-specific cyber threat landscape. When creating your project, just indicate attack scenarios, cyber threats or malicious actors you wish to simulate. You may attach a detailed scenario or just briefly indicate key attack vectors and methods you wish us to try against your web systems. Our security analysts and penetration testers will carefully go through the attack plan and get back to you in case of questions or suggestions on how to expand it.

The Red Team report will elaborate the pentesting tactics, techniques and procedures (TTP) and the obtained results equipped with a threat-aware risk scoring. Our security analysts and penetration testers remain at your disposal 24/7 before, during and after the Red Teaming exercise at no additional cost. The service is provided with a contractual zero false positives SLA and unlimited patch verification assessments so your developers can double-check that all flaws are properly fixed.

Software Composition Analysis

Get a comprehensive inventory of your open-sourced and commercial web software including CMS, JavaScript libraries and other dependencies with ImmuniWeb® Discovery. Bundled with attack surface management, the web application scanning leverages our advanced software composition analysis (SCA) technology to reliably fingerprint your software and the installed versions to identify known or publicly disclosed vulnerabilities from the OWASP Top 10 list. In contrast to traditional vulnerability scanners, the entire process is production-safe and will not slow down or disrupt your websites.

Just enter your company name to launch the discovery and continuous security monitoring of your external web applications, enhanced with ongoing testing for compliance with PCI DSS, GDPR or NIST requirements, TLS encryption, missing WAF and other misconfiguration and weaknesses. Dispatch instant alerts to relevant people in your team by using groups, tags and alerts on the interactive dashboard. Export the findings to PDF or XLS, use the API to send the data directly to your SIEM, WAF or bug tracking systems. Enjoy a fixed monthly price per company regardless the number of web applications and websites you have.

ImmuniWeb® Discovery

Third-Party Risk Management

ImmuniWeb® Discovery

Assess IT hygiene, cybersecurity and incident response of your business-critical vendors and suppliers with ImmuniWeb Discovery. Just enter a company name to get a comprehensive snapshot of its external attack surface, misconfigured or vulnerable systems and applications, unprotected cloud storage, mentions on Dark Web and data leaks, ongoing phishing or domain squatting campaigns targeting you or your vendor. The entire process is non-intrusive and production-safe, making it a perfect fit for a third-party risk management program (TPRM).

Get classified and risk-scored findings on the interactive dashboard where your vendors can connect to see the details and rapidly remediate any problems. Prevent surging supply chain attack by taking your vendor risk management program to the next level. Fulfill regulatory requirements to audit third-party systems that process personal, financial or health data. Enjoy a fixed price per company regardless the number of IT assets, mentions on the Dark Web or number of security incidents.

WAF Security Testing

Validate efficiency and resilience of your WAF or other security controls with ImmuniWeb® On-Demand penetration testing. Discover OWASP Top 10 and SANS Top 25 security vulnerabilities in your web applications, microservices and APIs and then check whether they are exploitable and how your current WAF configuration can be bypassed. Test whether your WAF properly mitigates exploitation of business logic vulnerabilities. Get the full benefits of our contractual zero false positives SLA and money-back guarantee if there is even a single false positive in your report.

Conduct unlimited patch verification assessments after the pentest to double-check if the findings are properly remediated by your software developers. Get the findings on the interactive dashboard, export vulnerability data in PDF or XLS formats, or get the findings directly to your bug tracking or SIEM systems. Leverage our technology alliances with the leading WAF providers to get ready-to-use WAF rulesets for all of the discovered vulnerabilities.

ImmuniWeb® On-Demand

Web Penetration Testing

ImmuniWeb® On-Demand

Detect OWASP Top 10, PCI DSS 6.5 List and SANS Top 25 vulnerabilities in your web applications, RESTful APIs and microservices with ImmuniWeb® On-Demand. Discover sophisticated privilege escalation, authentication bypass and business logic vulnerabilities. The service is provided with a contractual zero false positives SLA and a moneyback guarantee if there is even a single false-positive in your report. Customize testing in Black Box or authenticated, multiuser mode using MFA, OTP or SSO.

Run unlimited vulnerability verification assessments after the pentest at no cost, so your software developers can easily verify if the pentest findings are properly fixed. Get a multirole dashboard with the structured findings, download vulnerabilities in PDF or take advantage of our DevSecOps integrations to export the data directly into your bug tracking or SIEM systems. Leverage our alliances with the leading WAF providers for one-click virtual patching of any detected vulnerabilities.

Web Security Scanning

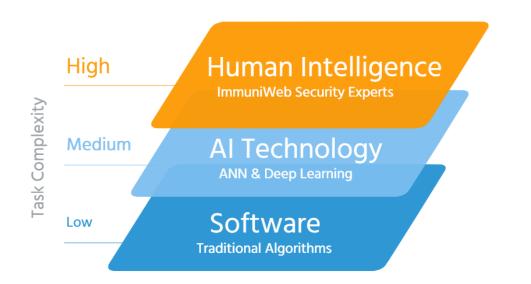

Run unlimited scans of your websites for OWASP Top 10 vulnerabilities with ImmuniWeb® Neuron. Schedule recurrent scans in a few clicks. Customize scan profile and authentication. All scans are provided with a contractual zero false positives SLA and money-back guarantee for a single false positive in your scan report. Our Machine Learning technology provides better vulnerability coverage compared to traditional scanners.

Scan reports are available via a multiuser dashboard with RBAC access permissions. Our turnkey CI/CD integrations enable 100% automation of web application security, privacy and compliance testing within your CI/CD pipeline on premise or in a cloud environment. Our 24/7 technical support is at your service may your software engineers have questions or need assistance.

ImmuniWeb® Neuron

Al for Intelligent Automation and Acceleration

ImmuniWeb leverages our award-winning AI technology for intelligent automation and acceleration of laborious tasks and processes, saving as much as 90% of human time compared to traditional human services.

Our security experts handle only to the most complicated tasks and processes that truly deserve human intelligence thereby offering **the best quality and best price of service** on the global market.

Proven Industry Recognition

Testimonials and Customers References

66

We used ImmuniWeb for some of our products and we have been highly satisfied from the provided service as valid vulnerabilities with no false positives were identified. The report ImmuniWeb delivered to us was quite clear in terms of the classifications and the description of the identified vulnerabilities, linking to the corresponding CVE and the fix recommendations. We recommend ImmuniWeb to other vendors to make their web products secure

66

The report was very detailed and clearly explained the risk at executive level, a great assistance in taking the report to senior management.

I would have no hesitation in recommending ImmuniWeb.

We believe ImmuniWeb platform would definitely address the common weaknesses seen in manual assessments. The AI-assisted platform not only automates the assessments, but also, executes them in a continuous, consistent and reliable fashion. Admittedly, the platform would definitely add quick wins and great ROI to its customers on their investment.

66

ImmuniWeb is an efficient and very easy-to-use solution that combines automatic and human tests. The results are complete, straightforward and easy to understand. It's an essential tool for the development of the new digital activities
