

Produce Software Packages In Record Time

Now you can:

- Avoid the need to repackage a majority of your application portfolio
- Select an application and download the latest release directly in AdminStudio
- Access command line information and detection criteria for thousands of vendor setups

What you get

Create deployment packages quickly and easily. The AdminStudio 2019 Package Feed Module provides built-in support vendor setups: download the latest versions and get validated silent command line parameters and detection criteria for thousands of vendor setups.

As an application manager, each application deployment is its own unique puzzle. The AdminStudio 2019 Package Feed Module is your figurative hack to solve these puzzles fast.

The Package Feed Module for AdminStudio—the industry standard for application readiness—provides a simple wizard for obtaining the latest versions of a vendor setup along with tested silent installation command lines to save you hours of research and testing.

Get customized deployment

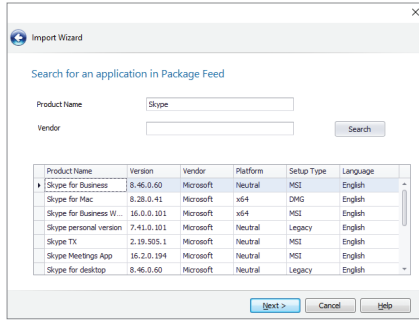

More than 30,000 companies have chosen AdminStudio for consistently packaging, testing and deploying. So it should be no surprise AdminStudio is the first to introduce such a powerful new capability.

Whether you're working on a Windows 10 migration or updating existing applications (commonly to address a security issue), AdminStudio Package Feed is unparalleled in its ability to get you quick and reliable deployment packages.

“[With AdminStudio] our IT team can prepare applications for deployment in 85% less time than before. The quality and reliability of the software packages are far superior, too.”

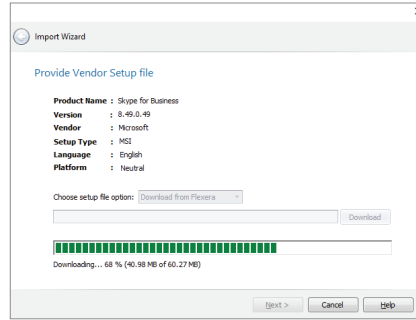

Jeff Phillips, application administrator, Team Fishel

1

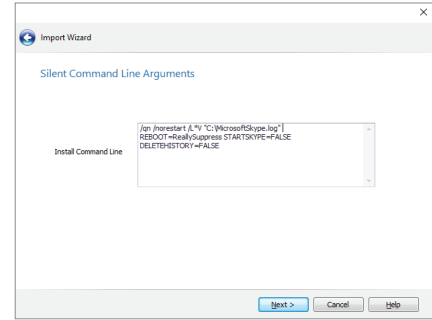

Look up the application you want to package from our database of thousands

2

Download the latest version directly in AdminStudio

3

Receive version-specific command line recommendations for silent deployment

Once you have the vendor setup in AdminStudio, you can perform dozens of valuable tasks, such as ...

- Gain insights to mitigate deployment risks with valuable reports
- Wrap the installation as a PowerShell or executable script quickly, leveraging customizable templates
- Publish directly to any of several popular systems management solutions, such as ConfigMgr, Altiris, VMWare Workspace ONE, JamfPro and others

Key product features

Unparalleled application support

Package Feed Module currently supports nearly 3,000 different installers with updates and new additions occurring daily.

Significant time savings

Quickly add new applications to the AdminStudio application catalog with all the details needed for immediate deployment.

Lowers risk and saves time by:

- Providing integrated access to download the latest version of the product
- Identifying the silent installation parameters for the particular version of the product
- Testing if the installation parameters are successful (Flexera lab tested)
- Determining the detection criteria for the application (path, file and version details are provided)

These are unquestionably the most time-consuming aspects of packaging applications for deployment.

PowerShell or WiseScript wrapping

Vendor setups do not always support the customizations you require from the command line. To avoid repackaging and continue to leverage the vendor setup directly, AdminStudio makes it easy to wrap a setup in a script where such customizations may be effectively included.

Package Feed Module supports nearly

3,000 vendor setups

Support for App-V and MSIX

Legacy and MSI packages are provided directly from vendors as signed, official installers, which are fully supported. However, AdminStudio can convert these to App-V, MSIX or other virtual formats with ease.

Get a free trial

The free trial of AdminStudio allows you to experience the speed and value of the Package Feed Module for the following products:

- 7-Zip
- Adobe Reader DC
- Google Chrome for Business
- Notepad++
- .Net Framework
